GUIDE

CREATE A **DUMMY DEVICE**

Would you like to create a setup where you can easily control multiple devices, send emails or SMS with a manual trigger? If this is the case you can create a dummy device and use events to control whatever you want with a single click.

LET'S GET STARTED!

### YOU WILL NEED

TELLDUS LIVE!

TELLSTICK NET/ZNET

---

1 — live.telldus.com

> live.telldus.com > **Control Devices**

+

---

2 — live.telldus.com

Add new device wizard

433,92 MHz receivers   **Self Learning on/off**

TELLDUS

This works with any type of Telldus gateway

---

3 — live.telldus.com

Add new device wizard

Name: Dummy Device

Next

---

4 — live.telldus.com

~~Learn~~   This is not an actual device and only used for controlling other actions, so skip the Learn step.

Done

! **Tip!** When the dummy device is created you can use events to make it control what you want. Examples of how to use dummy devices can be found in the guide "**Make a device dim to a specific level**" or "**Create Macros/Scenes**". You can also use a dummy device as an indicator, for example when a motion detector triggers, if you don't want to use an actual connected device.
