TELLDUS

SUNSET SCHEDULING FOR **SUMMER**

A common feature amongst Telldus users is to turn on a light when the sun goes down and turn them off again at bed time. This can be done in Telldus Live! using the scheduler. But what if, like sometimes in the summer, the sun goes down after bed time? In that case we have to use events.
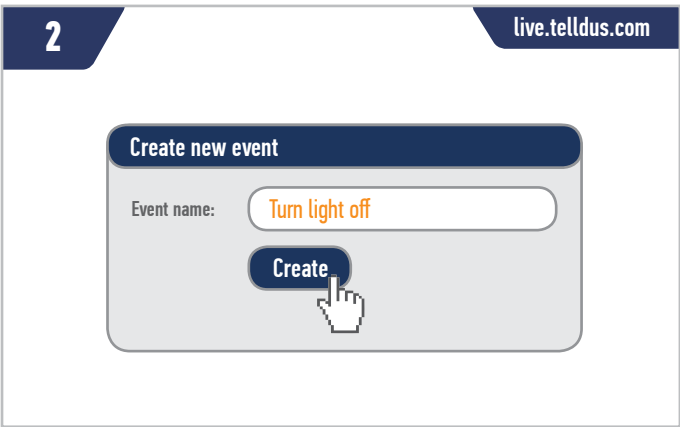

LET'S GET STARTED!

### YOU WILL NEED

WALL SOCKET RECEIVER

TELLSTICK NET/ZNET
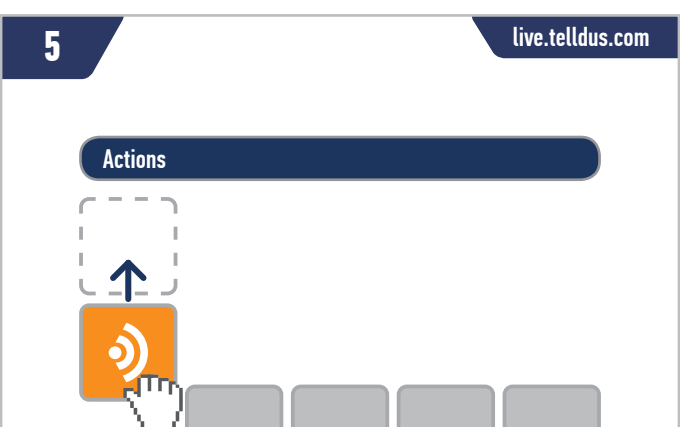

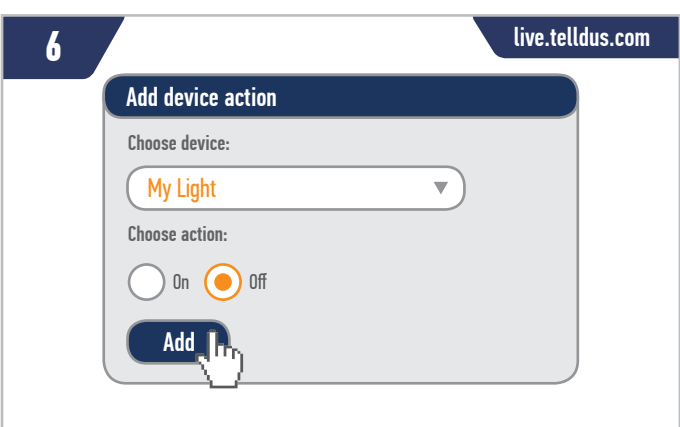

TELLDUS LIVE!

---

1   live.telldus.com

live.telldus.com ❯ Trigger **Events**

➕

---

2   live.telldus.com

Create new event

Event name: Turn light off

Create

---

3   live.telldus.com

Triggers

🕐

---

4   live.telldus.com

Add time trigger

Set the time when this trigger should trigger the event:

23 ▼ : 00 ▼

Location:

My Location ▼

Add

---

5   live.telldus.com

Actions

---

6   live.telldus.com

Add device action

Choose device:

My Light ▼

Choose action:

◯ On   ⦿ Off

Add

TELLDUS

7

8

Create new event

Event name: **Turn light on at sundown**

Create

9

Triggers

10

Add suntime trigger

Set the time when this trigger should trigger the event:

○ When the sun rises ● When the sun sets

Offset: **0** minutes

Location: **My Location** ▼

Add

11

Conditions

12

Add time condition

Select the time interval this event should run:

12 ▼ : **00** ▼ to **22** ▼ : **30** ▼

Add

13

Actions

14

Add device action

Choose device:

My Light ▼

Choose action:

● On ○ Off

Add

Note! The start time of the time condition in step 12 is not important, it just need to be earlier than the earliest sunset time throughout the year. The end time of the condition makes sure that the light never turns on later than 22:30 even if the sun has not set. You can tweak the times for the trigger and condition if you want. This setup works even in winter so no adjustments or additional scheduling is needed.

RESULT

You should now have two events that look like this:

Turn light off

Triggers	Conditions	Actions

Turn light on at sundown

Triggers	Conditions	Actions

Note! For time and sunrise/sunset triggers and conditions to work it is important that you have set the time zone and geographical position of your location. This is done in My Locations → click on the location → Time zone/Position.
